# What is Crypto Currency?

**Cryptocurrency** is a type of **digital money** that exists only online. It uses **blockchain technology** to keep transactions secure, transparent, and decentralized. Unlike traditional money issued by banks or governments, cryptocurrencies are not controlled by any single authority.

Key Points:

- 🔒 Secure – Protected by cryptography (complex codes).
- 🌐 Decentralized – No central bank or government controls it.
- ⚡ Fast & Global – Can be sent anywhere in minutes.
- 📖 Transparent – Every transaction is recorded on a public blockchain.
- ❓ Examples – Bitcoin, Ethereum, Litecoin, Ripple, and thousands more.

# What is Crypto Trading?

**Crypto trading** means **buying and selling cryptocurrencies** (like Bitcoin, Ethereum, etc.) with the goal of making a profit. Just like stock trading, the idea is to **buy at a low price and sell at a higher price** — but in crypto, the market is open **24/7 worldwide**.

## Key Features of Crypto Trading:

- ✅ **High Volatility** – Prices move up and down quickly, creating profit opportunities.
- 🌐 **Global Market** – Anyone can trade from anywhere, anytime.
- ⚡ **Fast Transactions** – Trades happen within minutes or even seconds.
- 🔒 **Decentralized** – No single authority controls the market.

## Types of Crypto Trading:

**Spot Trading** – Buying and selling instantly at market prices.

**Futures Trading** – Agreeing to buy/sell crypto at a future date and price.

**Day Trading** – Quick trades within the same day for small profits.
